

# Teaching Aids Required for this Sheet

(The RA should bring them to the class)

- A pair of hinged rectangular acrylic plates; this can be used to denote the quadrants.

A black and white photograph of a helicopter, possibly a Bell UH-1, parked on a grassy field. The helicopter is viewed from a side-rear angle. The main rotor blades are visible, and the tail boom has a star insignia. The background shows some trees and a clear sky. Overlaid on the image is the course title in large, bold, red and blue text.

# Projections of Points

# Projections of Points

## Conventions

Item	Label
Points in space (3D points)	A, B, C, ...
Corresponding points in plan (top view)	a, b, c, ...
Corresponding points in elevation (front view)	a', b', c', ...
Corresponding points in side views	a <sub>1</sub> , b <sub>1</sub> , c <sub>1</sub> , ...
Corresponding points in auxiliary views (depending on whether it resembles with top or front view)	a <sub>1</sub> , b <sub>1</sub> , c <sub>1</sub> , ... or a' <sub>1</sub> , b' <sub>1</sub> , c' <sub>1</sub> , ...
Hidden lines	Dashed
Axis lines	Dot dashed

Projection of points and lines are independent of projection angles. The distinction comes only for higher geometries.

# Projections of Points

## Various possible positions of the point

- (a) The point is in the 1<sup>st</sup> quadrant
- (b) The point is in the 2<sup>nd</sup> quadrant
- (c) The point is in the 3<sup>rd</sup> quadrant
- (d) The point is in the 4<sup>th</sup> quadrant
- (e,f) The point is lying in V.P. (above or below xy)
- (g,h) The point is lying in H.P. (in front or back of xy)
- (i) The point is lying in both H.P. and V.P.  
(The point is lying in xy.)

# Projections of Points

## (a) Projection of a point in the 1<sup>st</sup> quadrant

# Projections of Points

## (b) Projection of a point in the 2<sup>nd</sup> quadrant

# Projections of Points

## (c) Projection of a point in the 3<sup>rd</sup> quadrant

# Projections of Points

(d) Projection of a point in the 4<sup>th</sup> quadrant

## (e, f, g) Projection of a point in V.P./ H.P./ in XY

O is in XY

# Projections of Points

Summary (old – see table in the next slide)

- When a point is above H.P., its front view is above *xy* and *vice versa*.
- When a point is in front of V.P., its top view is below *xy* and *vice versa*.
- When a point is in the reference plane (V.P. or H.P.), its projection in the other reference plane is in *xy*.
- When a point is in the intersection of V.P. and H.P., both its projections coincide and lie in *xy*.

# Projections of Straight Lines

## Summary

Case	Quadrant	With respect to		Views w.r.t. xy Line	
		H.P.	V.P.	Front View	Top View
(a)	I	Above	In front	Above	Below
(b)	II	Above	Behind	Above	Above
(c)	III	Below	Behind	Below	Above
(d)	IV	Below	In front	Below	Below
(e)	I & II	Above	On	Above	On
(f)	III & IV	Below	On	Below	On
(g)	I & IV	On	In front	On	Below
(h)	II & III	On	Behind	On	Above
(i)	I, II, III & IV	On	On	On	On

# Projections of Points

## Example-1

Point A is 25mm above H.P. and 30mm in front of V.P. Draw its projections.

# Projections of Points

## Example-2

Point A is 20mm below H.P. and 30mm behind V.P. Draw its projections.

# Projections of Points

## Example-3

Point P is in the 1<sup>st</sup> quadrant and lies in an auxiliary plane perpendicular to H.P. and V.P. Its shortest distance from  $xy$ , the intersection of H.P. and V.P. is 70mm and is equidistant from both these planes. Draw its projections of this point and determine its distances from H.P. and V.P.

# Projections of Points

## Exercise-1

Draw the projections of points on the same ground line  $xy$  keeping the projectors 25mm apart:

A: in H.P. and 20mm behind V.P.

B: 40mm above H.P. and 25mm in front of V.P.

C: 40mm above H.P. and in V.P.

D: 25mm below H.P. and 25mm behind V.P.

E: 15mm above H.P. and 50mm behind V.P.

F: 40mm below H.P. and 25mm in front of V.P.

G: in H.P. and in V.P.

# Projections of Points

## Exercise-2

A point P is 40mm above H.P. and 30mm in front of V.P. Draw its projections. Find its shortest distance from xy by drawing its side view.

# Projections of Straight Lines

# Projections of Straight Lines

- Chapters 10 covers the details on Projections of Straight Lines.
- Roughly work out all the problems given to you.

# Projections of Straight Lines

## Various possible positions of the straight line

- (a) The line is parallel to one or both the reference planes
  - (a<sub>1</sub>) Special case: Line contained by one or both of the reference planes
- (b) The line is perpendicular to one of the reference planes
- (c) The line is contained in a plane perpendicular to both the reference planes
- (d) The line is inclined to both the reference planes

# Projections of Straight Lines

(a) Line parallel to one or both the ref. planes

**Note:** When a line is parallel to a plane, its projection on that plane will be of *true length*.

# Projections of Straight Lines

(a<sub>1</sub>) Line contained by one or both the ref. planes

This is a special case of (a)

# Projections of Straight Lines

(b) Line perpendicular to one of the ref. planes

# Projections of Straight Lines

## Example-1 (Solved Pb. 10-1, pp. 199)

A line PQ of 90mm long is in the H.P. and makes an angle of  $30^\circ$  with V.P. Its end P is 25mm in front of V.P. Draw its projections.

# Projections of Straight Lines

## Example-2 (Solved Pb. 10-2, pp. 200)

The length of the top view of a line parallel to V.P. and inclined at  $45^\circ$  to H.P. is 50mm. One end of the line is 12mm above H.P. and 25mm in front of V.P.

(a) Draw its projections.

(b) Find its true length.

True length is  $a'b'$ .

# Projections of Straight Lines

## Example-3 (Solved Pb. 10-3, pp. 200)

The front view of a 75mm long line parallel to H.P. measures 55mm. One of its ends is in V.P. and 25mm above H.P.

- (a) Draw its projections.
- (b) Determine its inclination with V.P.

$$\phi = \arccos(55/75) = 42.833^\circ$$

# Projections of Straight Lines

## Exercise-1 (Exercise Pb. 10(a)-4, pp. 201)

The top view of a 75mm long line measures 55mm. It lies in V.P. and has its one end 25mm above H.P. Draw its projections.

# Projections of Straight Lines

## Exercise-2 (Exercise Pb. 10(a)-7, pp. 201)

Two pegs fixed on a wall are 4.5m apart. The distance between the pegs measured parallel to the floor is 3.6m. If one peg is 1.5m above the floor, find the height of the second peg and the inclination of the line joining the two pegs with the floor.

# Projections of Straight Lines

(c) Line contained by a plane perp. to both ref. planes

(d) Line inclined to both the ref. planes

Figure 10.1 consists of two diagrams, (i) and (ii), illustrating the orthographic projections of a line AB.

(i) Line AB is perpendicular to the XY line. The line is shown in its true length in the front view (A'B') and the top view (ab). The front view A'B' is perpendicular to the XY line, and the top view ab is parallel to the XY line. The angle of inclination  $\alpha$  is shown as 0°.

(ii) Line AB is inclined to the XY line. The line is shown in its true length in the front view (A'B') and the top view (ab). The front view A'B' is inclined to the XY line at an angle  $\alpha$ , and the top view ab is inclined to the XY line at an angle  $\beta$ . The angle of inclination  $\alpha$  is shown as  $\theta$ .

# Projections of Straight Lines

## (d) Line inclined to both the ref. planes

A line AB, of length  $l$ , is inclined by  $\theta$  to H.P. and by  $\phi$  to V.P. Draw its projections (by  $\theta = 45^\circ$ ;  $\phi = 30^\circ$ ;  $l = 80$ ; A is 15 above HP and 25 in front of VP.).

Angle: Apparent > actual  
Dist. : Apparent < actual

# Projections of Straight Lines

(d) Line inclined to both the ref. planes ...

# **True Length of a Straight Line**

# True Length of a Straight Line

## Alternative 1

Make the line parallel to H.P. The top view will be a horizontal line and the front view will give the true length.

# True Length of a Straight Line

## Alternative 2

Make the line parallel to V.P. The front view will be a horizontal line and the top view will give the true length.

(i)

(ii)

# **Trace of a Straight Line**

# Trace of a Straight Line

Line is parallel to one or both the reference planes

Trace is the point of intersection of the line with the reference planes H.P. and V.P., respectively called Horizontal Trace (H.T.) and Vertical Trace (V.T.).

# Trace of a Straight Line

# Line perpendicular to one the reference planes

# Trace of a Straight Line

Line inclines to both the ref. planes

# Trace of a Straight Line

Line having ends in the reference planes

# Trace of a Straight Line

Line in a plane perpendicular to both the ref. planes

# Trace of a Straight Line

## Example-4 (Solved Pb. 10-7, pp. 213)

Point A is 50mm below H.P. and 12mm behind V.P. Point B is 10mm above H.P. and 25mm in front of V.P. The distance between the projectors of A and B is 40mm. Determine the traces of the line AB.

# Projections of Straight Lines

## Example-5 (Solved Pb. 10-8, pp. 214)

A line AB, 50mm long, has its end A in both H.P. and V.P. It is inclined at  $\theta=30^\circ$  to H.P. and at  $\phi=45^\circ$  to V.P. Draw its projections.

# Projections of Straight Lines

Example-5 (Solved Pb. 10-8, pp. 214) ...

# Projections of Straight Lines

## Example-6 (Solved Pb. 10-9, pp. 215)

A line PQ, 75mm long, has its end P in V.P. and end Q in H.P. It is inclined at  $30^\circ$  to H.P. and at  $60^\circ$  to V.P. Draw its projections.

**Note:**

As the sum of the angles is  $30+60=90^\circ$ , both projections become a vertical line.

# Projections of Straight Lines

## Example-7 (Solved Pb. 10-10, pp. 216)

A line PQ, 100mm long, is inclined at  $30^\circ$  to H.P. and at  $45^\circ$  to V.P. Its mid-point is in V.P. and 20mm above H.P. P is in 3<sup>rd</sup> quadrant and Q is in 1<sup>st</sup> quadrant. Draw its projections.

# Projections of Straight Lines

## Example-8 (Solved Pb. 10-11, pp. 216)

The top view of a 75mm long line AB measures 65mm, while the length of its front view is 50mm. Its one end A is in H.P. and 12mm in front of V.P.

- (a) Draw the projections of AB.
- (b) Determine its inclinations with H.P. and V.P.

$$\theta = \arccos(65/75) = 29.926^\circ$$

$$\phi = \arccos(50/75) = 48.190^\circ$$

# Projections of Straight Lines

## Example-9 (Solved Pb. 10-12, pp. 217)

A line AB 65mm long has its end A 20mm above H.P. and 25mm in front of V.P. The end B is 40mm above H.P. and 65mm in front of V.P.

- (a) Draw the projections of AB.
- (b) Determine its inclinations with H.P. and V.P.

$$\theta = \arcsin(20/65) = 17.920^\circ$$

$$\phi = \arcsin(40/65) = 37.980^\circ$$

# Projections of Straight Lines

## Example-10 (Solved Pb. 10-13, pp. 217)

The projectors of the ends of a line AB are 50mm apart. The end A is 20mm above H.P. and 30mm in front of V.P. The end B is 10mm below H.P. and 40mm behind V.P.

- (a) Draw the projections of AB.
- (b) Determine its true length.
- (c) Determine its inclinations with H.P. and V.P.

Ans: AB=

$$\theta = \sin^{-1}(20/65) = 17.920^\circ$$

$$\phi = \sin^{-1}(40/65) = 37.980^\circ$$

# Conclusions

- Roughly work out all the problems given to you. Only if you come prepared, you will be able to complete all problems of the sheet in the drawing session.

**Thank You!**
